PRODUCT DEVELOPMENT & TESTING

CRAFTSMAN® TOOLS ARE LAB-TESTED

PRODUCT DEVELOPMENT – The Craftsman Product Development and Engineering Team tests and approves every tool we sell. This team provides the foundation for our legacy of quality, durability, performance, and value. Our team uses the following developmental and testing facilities:

PHYSICAL TESTING FACILITIES

OPEN-BENCH AREAS – Throughout the facility are special use locations where most types of products can be used or examined.

PHYSICAL ENDURANCE LAB – Holds unique equipment for a wide variety of repetitive motion and structural durability tests.

MECHANICAL TEST AREA – Used to test tensile, compression, torsion and hardness properties, primarily in Craftsman mechanic and hand tools.

POWER TOOLS LAB – Included in this sound-isolated room are connections for high current welding, computer-controlled life test stations, and motor performance evaluation equipment.

BATTERY LAB – Tests the performance life, safety and durability of primary and rechargeable batteries, plus battery chargers.

ACOUSTICS LAB – Tests and analyzes performance in product categories such as air tools, hand tools, portable power tools, shop vacs, and compressors. Most testing is automated by means of various cycling mechanisms.

INNOVATION

The Dual Mark Socket is the latest convenience feature. The large laser-etched display on the socket face makes finding the right size a snap, and it mirrors the conventional engraved size marking near the socket base.

INNOVATION

Socket wrench sets are basic for any professional technician's tool set. The 3/8 inch drive set is the most popular Craftsman® drive size. Sockets come in 6 pt. for a precise high torque fit and in 12 pt. for a tight but easy to use fit. Some 8 pt. sockets are also available. The sockets come in inch and metric sizes and standard and deep depths.

INNOVATION
